Federico Calderón

Web and Android Developer

I am a Computer Engineering student at UCA, specializing in fullstack development with React and TypeScript, and backend experience with Spring and Spring Boot, in addition to Android app development using Kotlin and Jetpack Compose. I have worked on personal and academic projects that showcase my ability to create functional and visually appealing solutions.

Spanish	Native
English	Intermediate - Advanced

Featured Projects

POKEDEX
Frontend development
Web application developed with TypeScript and React that consumes the PokeApi and displays Pokémon and Items in various ways, including their detailed information. It is an improvement of an old Personal Project.

FLAVORS IN RESERVE
Frontend development
Final project for Web Programming, a platform where users can share and upload recipes. I was primarily responsible for frontend development, creating intuitive and user-friendly interfaces.

TASK ME!
Android development
A mobile project developed in Kotlin and Jetpack Compose, currently in development for its launch on the Play Store. It will allow users to offer personal services to others.

TRIVIA
Frontend development
A website with two versions: one in Vanilla JavaScript and another in React.js. It allows users to answer questions using the "OTDB" API.

Education

Universidad Centroamericana (2022-2027)
Computer Engineering

Udemy (2021-2023)
Master in CSS and advanced JS (Flexbox, Grid, DOM, animations, best practices)
